PROJECTS

Visulon PowerPoint Add-In (07/2022 - Present)

- The purpose of the "Visulon PowerPoint Add-In" project is to empower users with a seamless and visually immersive experience in creating engaging PowerPoint presentations. This add-in aims to enhance the presentation creation process by integrating 3D product visualization and streamlined functionality within Microsoft PowerPoint.
- The front end and Backend of the application is developed using Windows form technology (C#, .Net Framework, Web API.)

Powerol DMS (04/2022 - 06/2023)

- Powerol DMS is a web-based application developed for the client Mahindra. The main purpose of this project is to provide efficient and effective services related to installation, commissioning, FSC, and preventive maintenance to the customers of Powerol. The application follows a three-tier architecture that separates the presentation, business logic, and data storage layers.
- The front-end of the application is developed using ASP.NET and HTML, CSS, and Bootstrap. The middle tier of the application is developed using C# .NET and ASP .NET, and the data storage is managed using MS SQL Server.
- The application provides various features to the users, such as service request management, asset management, customer management, and user management. Users can submit service requests, view their asset information, and track the progress of their service requests through the application.
